Jedidia Lemuel B. Cruz

Santa Rosa City Laguna

OBJECTIVES

To show my potential skills and to be part of the progressive organization where I can demonstrate my knowledge, experience, skills and learning outcomes I acquired. I'm seeking to gain experience in my field. I am excited to learn more and enhance my abilities in the process. I offer my dedication, service and determination to be an asset to your company. Providing nothing less than the very best.

RELEVANT SKILLS

- Computer Literate Flexible and
- Hardworking in terms of work Initiative
- Problem Solver Communication
- Flexibility Time Management Team Collaborative
- Visual and Interaction Design

EDUCATIONAL BACKGROUND

Univeristy of Perpetual Help System DALTA
Calamba Campus

Bachelor of Science in Computer Engineering
2020-2024

WORKING EXPERIENCE

SoftwareEngineer (Associate Consultant)
MobileMinds Inc.
2024-2025

Web Application Developer
NYK-Fil Maritime E-Training, Inc.
2024

Freelance Developer
Self-Employed
2022-2023

TECHNICAL SKILLS

Frontend:
JavaScript, Vue 3, Inertia.js, TypeScript, Tailwind CSS, Next.js, React, Framer Motion, Alpine.js, GSAP, Lucide React, Vite

Backend:
Laravel 12, PHP, Python,Supabase, Node.js, PostgreSQL, SQL Server, MySQL, Spatie Packages, RESTful APIs, JWT, OAuth, Pusher, Redis

Mobile & Game Dev:
React Native, Expo, Matter.js, Zustand, React Query, Reanimated, React Native SVG, Expo Audio

AI & Machine Learning:
OpenAI, OpenCV, Roboflow, PyTorch, YOLOv8, Google Colab

Microcontroller:
Arduino, Raspberry Pie

Devops:
Docker, Firebase, Google Cloud, Vercel, Stitch

Developer Tools:
Gitlab, GitHub, SourceTree, Azure Data Studio, Postman, VS Code, Lucide Icon, Material Icon

Marketing & Platforms:
Google AdSense, Google Play Console, Google AdMob

CERTIFICATION

The Artifiicial Intelligence for Communities Workshop
VJal Institute
Jan 2026

Google AI Essentials
Google Course via Coursera Platform
Nov 2024

Non-Credit Professional Certificate
Google IT Automation with Python

Google Course via Coursera Platform
June 2024

CompTIA IT Fundamentsl (ITF+)
CompTIA
Nov 2024

Seminars Unveiling Tomorrow: The Force of Artificial Intelligence and Machine Learning
ICT Literacy and Competency Development Bueau
July 2024

PRE-PROFESSIONAL PROJECTS

Pusoy Dos Game (Personal Project) **2026**

A real-time multiplayer implementation of the classic Filipino card game. Features a high-performance custom game engine and a mobile-optimized glassmorphism UI.

Tools/Tech Used

- TypeScript
- Next JS 16
- React 19
- Pusher Channels
- Upstash Redis
- Tailwind CSS
- CSS
- Lucide Icons
- Vercel deployment
- Google AdSense

Overall Contribution:

- Architected a full-stack real-time multiplayer infrastructure using Next.js and Pusher, coupled with serverless Redis for low-latency state persistence.
- Developed a comprehensive game logic engine, implementing hierarchical card rules, valid 5-card combinations, and strict turn-based progression.
- Designed a premium "Glassmorphism" interface, utilizing advanced CSS Grid for a seamless cross-device experience.
- Implemented a scalable lobby and room management system, supporting unique invite URLs and automated player synchronization upon joining/leaving.
- Implemented server-side security protocols to mask sensitive opponent hand data, ensuring fair play and preventing client-side exploitation.
- Streamlined application deployment and monetization through optimized SEO metadata and automated AdSense site verification integration.

Skills:

- Proficient in Next.js 16 and React 19 for building dynamic, modern web applications.
- Experienced in Real-time Networking using Pusher for low-latency state synchronization.
- Knowledgeable in NoSQL database management with Upstash Redis for fast data persistence.
- Skilled in algorithmic logic through the development of a custom Game Engine with complex rules.
- Experienced in Responsive Web Design using CSS Grid and dynamic viewport units (dvh) for cross-browser stability.

MATH Stickman Challenge (Personal Project) **2026**

An educational mobile game designed to help young learners practice basic math skills such as addition, subtraction, multiplication, division and fractions. The game uses a visual feedback system where a stickman character loses body parts after incorrect answers, encouraging students to answer carefully. The game is currently in early internal access and is close to being published on the Google Play Store.

Tools/Tech Used

- Expo React Native
- TypScript
- React Native Reanimated
- React Native SVG
- Supabase
- Zustand
- React Query
- Expo Audio
- Google AdMob

Overall Contribution:

- Built a complex SVG character system with Reanimated, featuring dynamic expressions, body animations, and a procedurally generated seasonal map that changes every 25 levels.
- Created a Dressing Room shop with hundreds of avatar combinations, fully synced with Supabase for persistent storage.
- Developed a procedural Math Engine with three difficulty tiers to ensure a smooth learning curve.
- Implemented strategic power-ups like Time Freeze, Healing Potion, and Hint Fireflies to improve retention.
- Integrated real-time leaderboards and cross-device sessions using Supabase PostgreSQL and Auth.
- Synced haptics and layered audio (BGM/SFX) with key gameplay moments for a more immersive feel.
- Optimized SVG rendering to maintain smooth 60FPS performance on Android devices.

Skills:

- Knowledgeable in React Native and Expo for building high-performance, cross-platform mobile applications.
- Experienced in Hardware-Accelerated Animations using React Native Reanimated and SVG for complex, fluid 2D character systems.
- Knowledgeable in BaaS (Backend-as-a-Service) integration with Supabase for real-time data synchronization, PostgreSQL management, and secure authentication.
- Skilled in State Management using Zustand and React Query for efficient data fetching and persistent game state management.
- Experienced in Mobile UX/UI Design, implementing haptics, layered audio (BGM/SFX), and responsive layouts for consistent performance across Android devices.

Supplier Management System **2024**

A system that facilitates efficient transaction management between a company and its suppliers regarding Bill of Materials. The system will provide the process of publishing BOMs more efficient, notifying suppliers, receiving and evaluating quotations, and finalizing purchases.

Tools/Tech Used

- PHP
- Laravel, Livewire
- Bootstrap
- JavaScript Git, Github composer, npm
- MySQL

Overall Contribution:

- System overall UI design.
- Implemented upload documents for supplier's credentials. Implemented Supplier dashboard with backend using controller and livewire.
- Implemented forgot password of account for admin and supplier account via confirmation link thru Gmail.
- Added real-time password checker for change password account.
- Helped in finishing the admin dashboard by implementing some features that is needed in the admin dashboard.

Skills:

- Knowledgeable in PHP Laravel 10 framework.
- Knowledge of designing the system using Bootstrap, CSS, and JavaScript.
- With a good and pleasing personality, has a sense of responsibility and accountability.
- Learned to be a collaborative team member in order to achieve project goals.
- Intermediate experience in using Livewire to easily implement functionality in the system.

Capstone **2023 - 2024**

Best in Thesis

FireQuake Detection at UPHSD-Calamba: Image Processing and Seismic Sensor Integration A prototype that detects fire using real-time webcam and earthquakes using accelerometer to improve safety of the university against risk and disaster.

Tools/Tech Used

- Python
- YOLOv8
- Google Colab
- Jupyter Notebook
- OpenCV
- Roboflow
- Visual Studio Code
- Thonny

Hardware Used

- Camera
- Seismic
- Sensor LED Buzzer
- ADC Converter
- Raspberry Pi

Overall Contribution:

- Labeled the datasets using Roboflow.
- Train the model using YOLOv8 to detect fire and smoke detection.
- Developed the web application of the prototype where you able to view the real-time monitoring and log history of the fire and smoke detection and seismic graph of the earthquake detection as well as the earthquake log history.

Skills

- Proficient in the Python programming language for developing the FireQuake detection prototype.
- Strong understanding of the software development life cycle High-level of experience with various IDE's such as Visual Studio, Thonny, and Google Colab Experience in development with architectural design and hardware design.
- Knowledgeable in using Roboflow for dataset labeling and augmentation, ensuring high-quality training data for YOLOv8.
- In-depth knowledge of training datasets for fire and smoke detection using YOLOv8, showcasing advanced computer vision skills.
- Uses material design and supports libraries Knowledgeable about seismic graph visualization.
- Intermediate experience in Raspberry Pi microcontroller programming is needed to enable real-time monitoring and control of the LED and buzzer.
- Intermediate experience with the accelerometer sensor and ADC converter Knowledge of creating websites using Flask, HTML5, Bootstrap, and JavaScript

PROFESSIONAL PROJECTS

AI Assistance Mobile App (Backend Server **2025 - 2026**

This project is a dating app that uses AI to generate personalized pickup lines. It helps users start conversations by providing creative and relevant message suggestions.

Tools/Tech Used

- Node Js
- Express
- Firebase
- Google Play Console
- Google Cloud Console
- Axios
- Middlware
- Postman
- RESTFul API
- OpenAI

Overall Contribution:

- Created a backend server to support API's to support the Dating mobile app.
- Integration of OpenAI to the backend services.
- Developed backend APIs to verify and manage Google Play subscriptions, including storing purchase data and updating user subscription status.
- Integrated Cloud Pub/Sub to publish subscription events, enabling real-time notifications for subscription verification and cancellation.
- Configured Google Play Real-Time Developer Notifications (RTDN) and verified Pub/Sub topic connectivity.

Skills:

- Proficient in developing backend applications using Node JS and Express.
- Knowledgeable in working with Firebase services including Firestore and Cloud functions.
- Skilled in Integrating and managing Google Play subscriptions and Real-Time Developer Notifications (RTDN).
- Experienced using Google Cloud services like Pub/Sub for event-driven architecture.
- Experience in using Google Play Console to connect and manage service accounts from Google Cloud Console for subscription management and real-time notifications.
- Knowledgeable on working with OpenAI API for AI integration into backend services.
- Knowledgeable on doing testing and debugging APIs using Postman.

Full System Redevelopment: Employee Portal Transition from ColdFusion to Laravel (Asia United Bank) **2025**

A project focused on rebuilding the existing Employee Portal by migrating it from a ColdFusion system to a modern Laravel framework, improving performance, security, and maintainability.

Tools/Tech Used

- Laravel 12
- Inertia Js
- Vue3 Js
- Tailwind CSS
- Dynamic Link Library
- SQL Server
- GitLab
- Git
- SourceTree
- Docker
- Azure Data Studio
- Spatie Laravel Multitenancy

Overall Contribution:

- Prepared the team for project contributions.
- Developed major modules and components for reference.
- Replicated the ColdFusion encrypt/decrypt algorithm for user passwords.
- Addressed database connection switching with Spatie Laravel Multitenancy.
- Implemented encryption/decryption for salaries and monetary amounts using the existing DLL.

Skills:

- Proficient in Laravel 12 and backend module development.
- Skilled in implementing Spatie Laravel Multitenancy for database switching.
- Experienced in legacy encryption replication and secure data handling.
- Knowledgeable in application security using Spatie packages.
- Managed version control and collaboration using Git, GitLab, and SourceTree.
- Knowledgeable in DLL-based encryption for sensitive salary data.
- Capable of building core project structures and reusable components.
- Strong troubleshooting and problem-solving skills in authentication and database issues.
- Effective team collaborator with clear technical communication.

Migrating Desktop Tellering System to Web Application with Content Management System (Asia United Bank) **2025**

Webified desktop tellering system with CMS using Laravel 12 + Vue 3.

Tools/Tech Used

- Laravel 12
- Inertia Js
- Vue3 Js
- Tailwind CSS
- RESTful API
- MySQL
- GitLab
- Git
- SourceTree

Overall Contribution:

- Developed the Content Management System (CMS).
- Created a reusable component for the Web Tellering POC project.
- Implemented the Check Deposit module across the projects.
- Implemented officer-override features using Laravel Reverb (WebSocket).
- Implemented a mock API call using the REST API.
- Fixed the 419 “page expired” error that occurred when running both projects simultaneously on localhost.

Skills:

- Proficient in Laravel 12 framework, MVC, and RESTful API development.
- Front-end design experience with Tailwind CSS and JavaScript.
- Skilled in data modeling and database management.
- Knowledgeable in application security using Spatie packages and Laravel Gates/Policies.
- Managed version control and collaboration using Git, GitLab, and SourceTree.
- Reliable, accountable team player with strong interpersonal skills.
- Managed version control and collaboration using Git, GitLab, and SourceTree.
- Took initiative in planning and problem-solving, showing accountability for deliverables and timelines.

Monitoring Work Order System (MobileMinds, Inc) **2025**

A web-based system that streamlines work order tracking, time charges, leave management, and manpower allocation across projects. It allows employees to log daily work hours per project, while managers can review and approve leave requests, monitor manpower distribution, and generate computed reports for efficient project oversight.

Tools/Tech Used

- Laravel 11
- Inertia Js
- Vue3 Js
- Tailwind CSS
- MySQL
- GitLab
- Git
- SourceTree

Overall Contribution:

- Created the base project structure.
- Designed and implemented the database schema.
- Developed CRUD functionalities for various project modules.
- Integrated Spatie packages for role management and authentication security.
- Implemented email notifications for password reset functionality for both new and existing employees.
- Utilized Eloquent ORM for efficient database interaction.

Skills:

- Proficient in Laravel framework with experience in project setup and architecture.
- Skilled in database schema design and implementation.
- Experienced in developing CRUD functionalities across multiple modules.
- Knowledgeable in application security and role management using Spatie packages.
- Proficient in using Eloquent ORM for database interaction.
- Reliable and collaborative team player with a sense of accountability and responsibility.
- Strong problem-solving skills with initiative in improving system functionality.

Content Management System
(Rustan's Coffee Corporation (Philippines)) **2024**

A web-based system that manages employee records, controls user roles and permissions, and maintains accountability through a comprehensive audit trail. It provides secure, efficient, and centralized administration for organizational operations.

Tools/Tech Used

- Laravel 11
- Inertia Js
- Vue Js
- Tailwind CSS
- MySQL
- GitLab
- Git
- SourceTree

Overall Contribution:

- Established the Eloquent ORM.
- Integrated Spatie packages to implement role- and permission-based security.
- Designed database schema and implemented Eloquent ORM models for efficient data access.
- Implemented the CRUD functionality on the projects.

Skills:

- Proficient in Laravel with expertise in Eloquent ORM for efficient data management.
- Skilled in designing and implementing database schemas and models.
- Experienced in developing CRUD functionalities across multiple modules.
- Knowledgeable in role- and permission-based security using Spatie packages.
- Strong problem-solving skills and ability to optimize application data access.
